# StrategyController

Description

The StragegyController component is needed to run the strategies.

It contains a queue in which strategy requests will be stored and a thread which will process these requests in the received order.

Implementation

It's present by default in the Strategy Folder.

Properties

- *LogExt*: Allows the configuration of logs sending. See Logs for more information.
- *Enabled*: Enables or disables the component.
- *CurrentStrategy:* Displays the currrently played strategy.

Actions

- *Shutdown*: Stops the currently processed request and empties the queue. To be used as a last resort when a strategy seem to be stuck
