

# Move

## Summary

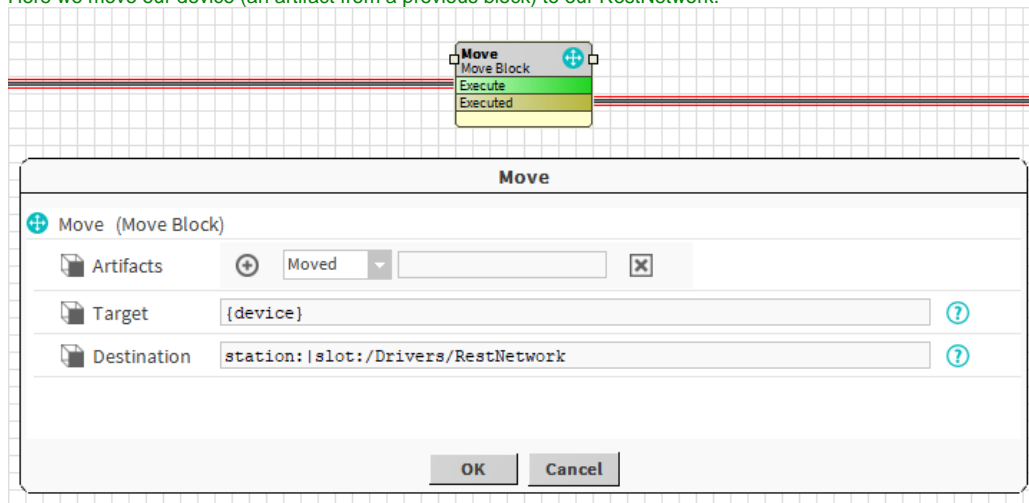

This block is used to move a component to a given destination.

## Implementation

- Drag and drop the block from the palette
- Link the "execute" action from the "executed" topic of the previous block
- Define the target (the component to move)
- Define the destination.

## Example

Here we move our device (an artifact from a previous block) to our RestNetwork.

## Properties

- *Artifacts*: Artifacts created by this block
  - *Moved*: ord of the moved component.
- *Target*: [SFormat](#) to define the component to move. **Ex:** the device created by a previous block
- *Destination*: [SFormat](#) to define the destination where we want to move the target.
