# RemoveComponent

Summary

This block is used to remove a component from a target

Implementation

- Drag and drop the block from the palette
- Link the "execute" action from the "executed" topic of the previous block

Example

This block removes a component inside the origin

Properties

- *Target:* SFormat to define the target component to remove.

Advanced Properties

- *RemoveSynchronously:* Determines if the remove operation will be done synchronously or not. For retrocompatibility reasons, the value is set to false, so the remove operation will be done at the end of the strategy (allowing you to do other operations on the component before its deletion). **Nevertherless it is advised to set this to true for most situations.**

> ⊘ If your origin targets multiple components and RemoveSynchronously is set to false, the operation will only work on the last component

Behavior: DO

The target is removed from its parent.

Behavior: UNDO

Nothing happens.
