

QueryArtifact

Summary

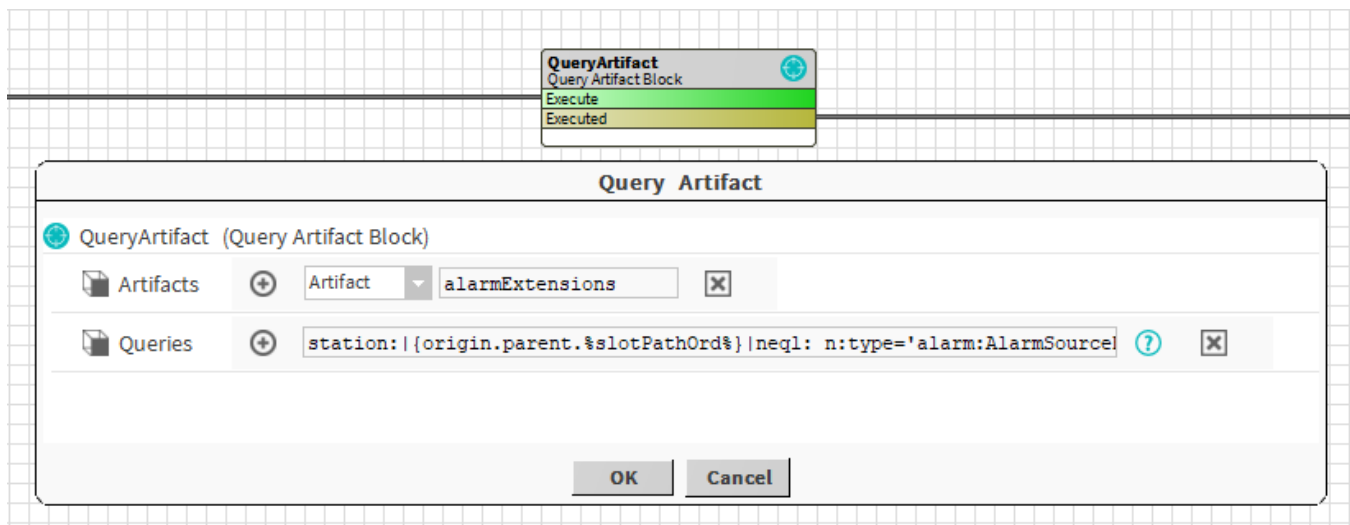

This block is used to create a new artifact from queries like a neql or bql. This artifact will then be used in the following blocks.

Implementation

- Drag and drop the block from the palette
- Link the "execute" action from the "executed" topic of the previous block

Example

This block creates an artifact with all the alarm extensions contained in the parent of the origin

Properties

- *Artifacts*: Artifacts created by this block. Be careful, the artifact is an array, you will need sometimes to use `.first` in a SFormat to use it.
- *Queries*: [SFormat](#) to define the query: a neql or a bql. Note you can combine several queries in the same artifact.

Behavior: DO & UNDO

An artifact will be created.
